

Simple Origami Butterfly

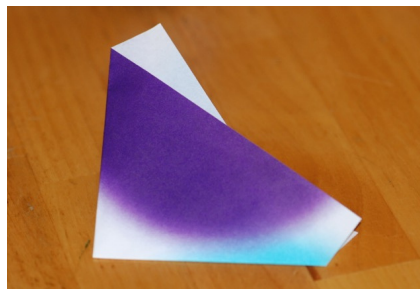

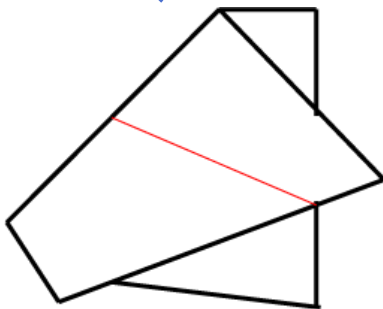

* Start with a square piece of paper, any size. If it has colors only on one side, make sure the colored side is facing out on the first fold.

* Draw the upper left corner to the middle of the right side until it extends past the edge. Fold. This creates two triangular "tails", which should be symmetrical.

* Now fold from the center of the left side to the midpoint between the "tails" (along red line)

* Fold about 1/3 inch along the center fold to form the body. Unfold and repeat other side.

* **That's it!**
